

# Do your patients suffer from these hidden allergic conditions?

**Allergy impacts about one in every five of your patients.**

Allergy can trigger or worsen a number of chronic conditions — especially those listed below. Identifying and treating the underlying allergy safely with sublingual immunotherapy may help reduce or eliminate these conditions.

Think about the number of patients under your care — one in five might benefit from treating the cause of their allergies.

Which of your patients are suffering from conditions beneath the surface of the allergy iceberg?

- 
- ← Allergic Rhinitis
  - ← Asthma
  - ← Sinusitis
  - ← Eczema
  - ← Anaphylaxis
  - ← Migraine
  - ← Chronic vaginitis
  - ← Irritable Bowel Syndrome (IBS)
  - ← Depression & Anxiety
  - ← Eosinophilic Esophagitis
  - ← Psoriasis

We can help you build a strategy to reach these patients, so they can benefit from the help you already provide.
