

Looking for a way to manage your allergies?

We now offer sublingual immunotherapy

Sublingual immunotherapy, also called allergy drops, works like allergy shots by gradually helping your body tolerate whatever causes your allergies. The difference is instead of getting an injection, the antigen (allergy causing substance) is given under your tongue in a painless liquid drop form.

Allergy drop benefits:

- Take at home, or wherever you are, three times daily. No weekly office visits needed.
- Custom prescription based on your history, exam, and allergy testing.
- Treats the cause of your allergies, rather than masking the symptoms.
- Lowers allergy related costs over time.

If you're interested in testing your allergies and treating the root cause of your allergies, contact us to set up an appointment.
